

Release Two Overview

Team 96

Tutor: Dr. Venkat Venkatachalam

Version: 1.0

Date: 27/10/2016

Testing:	2
Future Development:	2
Programming:	3
Project Burndown:	4
Sprint 3 (Hours):	4
Sprint 4 (Hours):	4
Release 2 (Story points):	4
Project Burndown (Story points):	5

For release 2, Story IDs 5, 9, 10, 12, and 15 were designated for completion. At the close of release 2, the team had completed all allocated user stories. This release included the development of: direct driver communication, the rating system, delivery itinerary and tracking, and service list.

Testing:

After the completion of these stories both manual and automatic acceptance tests were created out to identify what works and what doesn't within the system. This involved the use of 'Selenium IDE' in order to carry out automated in browser testing, as well as manually tests and the recording of . These tests can be found under 'Test Cases'. There was a 99% success rate for these tests.

Future Development:

Currently, both Release 1 and 2 have been completed. However, in order to further this project with the addition of more functionality, a further 2 releases have been planned. With the completion of these two further releases, the current project would deliver the total functionality, from all the user stories.

Programming:

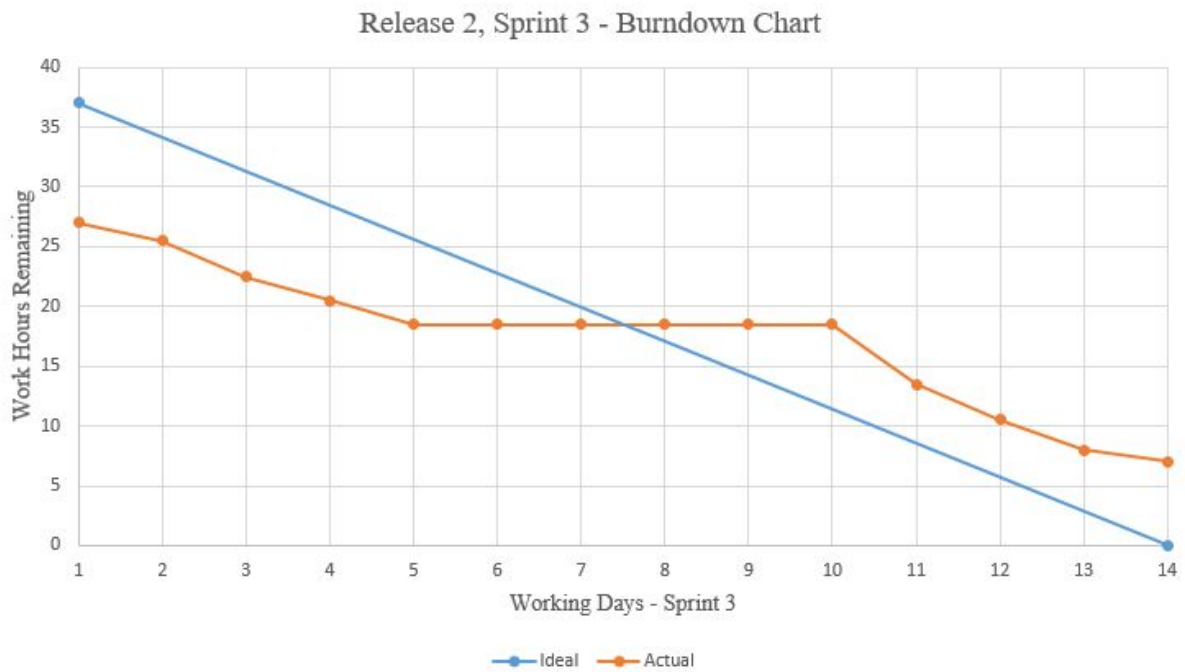

Source control for this project was completed using GitHub's integrated file history which can be accessed from the website, below is a snapshot taken from the GitHub website for the "rating.php" file demonstrating the source control:

History for [TIB-Package-Delivery](#) / [pages](#) / [rating.php](#)
